DETAILED ACTION

Claims 1-36 are pending in the present application.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-25, drawn to an oligonucleotide and composition, classified in class 536, subclass 24.5.
- II. Claims 26-36, drawn to a composition for detecting nucleic acids of the genus *Candida* method of determining whether an organisms in the genus *Candida* is present in a test sample, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP 806.05(h)).

The invention of Group I is drawn to an oligonucleotide and composition whereas Group II is drawn to a method of identifying whether an organism of the genus *Candida* is present in a sample. The oligonucleotide and composition alone may be used for purposes other than the method of Group II. It may be used as an antisense oligonucleotide for the purposes of inhibiting expression of the gene corresponding to the oligonucleotide. For this reason, the product may be used in a materially different process than that of Group II. Therefore, restriction is proper.

This application contains claims directed to patentably distinct species of the claimed invention. The nucleotide sequences of the present claims are subject to a restriction requirement. Nucleotide sequences are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq. Accordingly, in most cases, only one (1) independent and distinct nucleotide sequence will be examined in a single application without restriction.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Additionally, the search required for Group I is not required for Group II such that restriction is proper.

Conclusion

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
